

360 degrees without dead angle Handheld electric baler

Dual battery configuration

Pull 6000N

WMM-21A

Size	Charging time
340*120*150mm	90minutes
For broadband	Apply with thick
11-19mm	0.5-1.2mm
Suitable for packing belt	
PP packing belt, PET packing belt	
Maximum clamping force	
6000 N	
Weight	Melting time
3.66kg	2-5seconds
Adhesive tape	Machine power
Friction welding	3KW
Battery life	
Can be recharged more than 2000 times	

No knotting

The friction welding; tighten, bonding, cut at one time.

Band-free design

It simplifies the wear mode, different traditional balers, free zone pockets, faster operation speed.

High-strength alloy materials

High strength alloy material is used for durability , reliable design and advanced manufacturing technology .

Digital display device

Pull adjustment and weld time adjustment can be displayed through the screen, which is more intuitive and the performance is more stable.

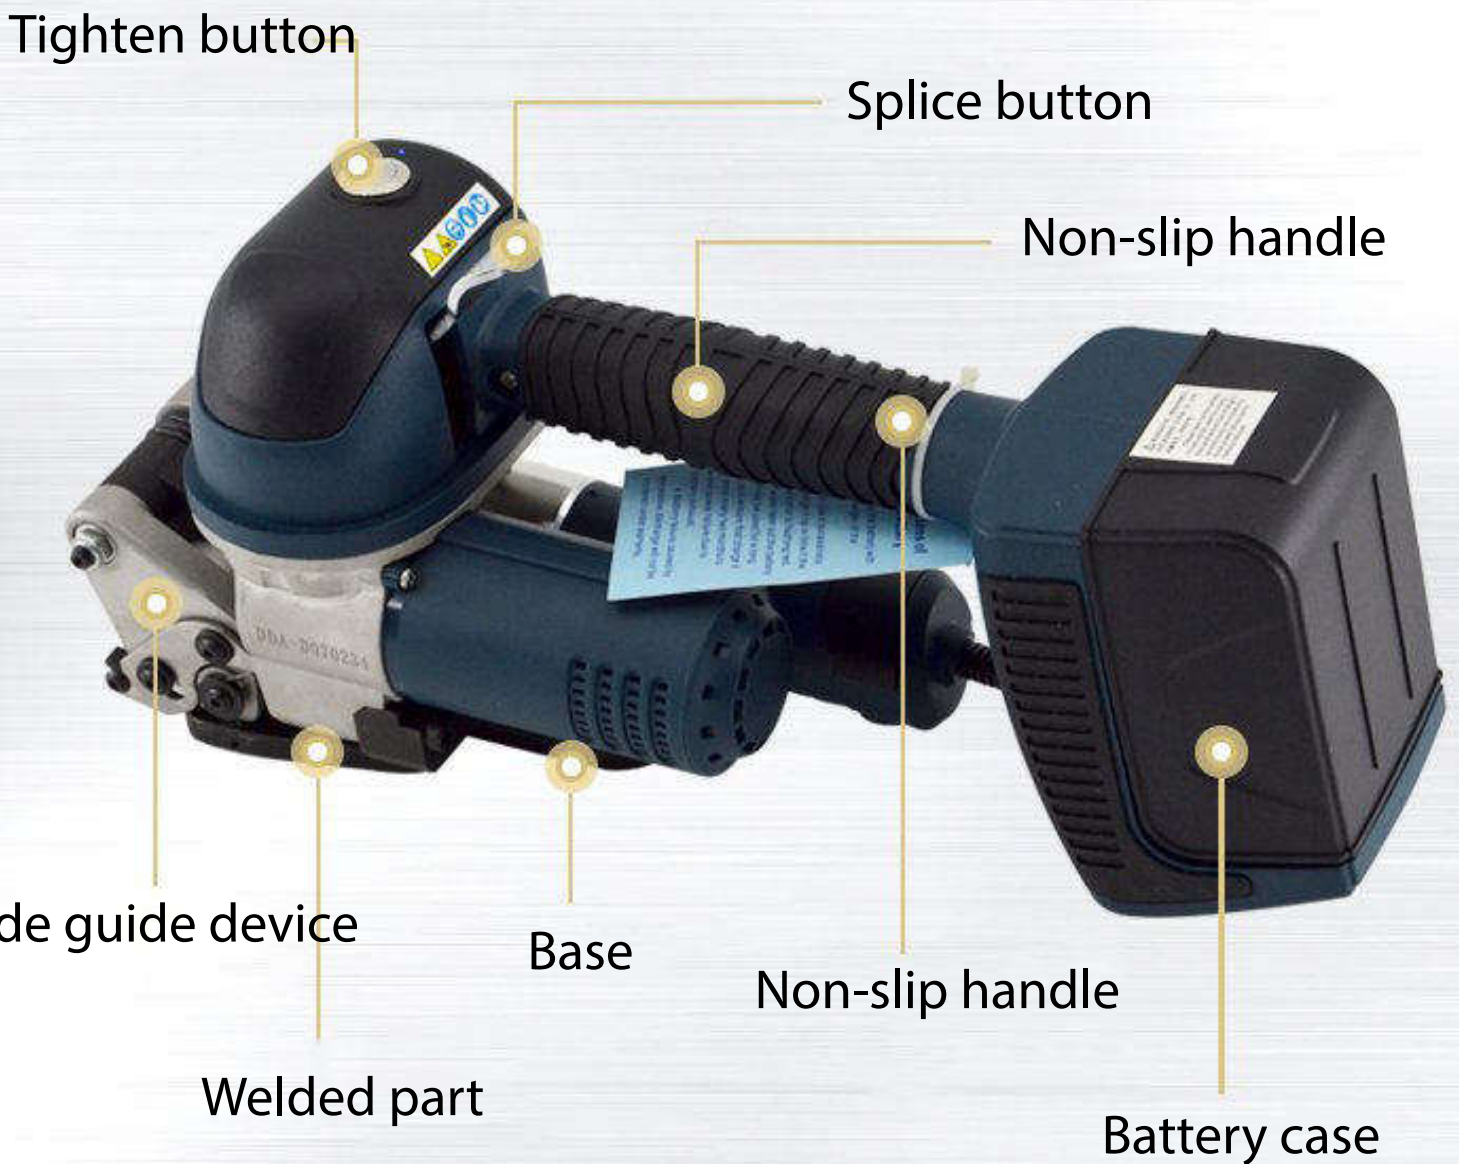

Original imported parts

The circuit boards, pull in and click, and fusion clicks are all imported, double battery configuration, stable operation and more mature products.

Product parameters

The details determine the quality of the machine

01.

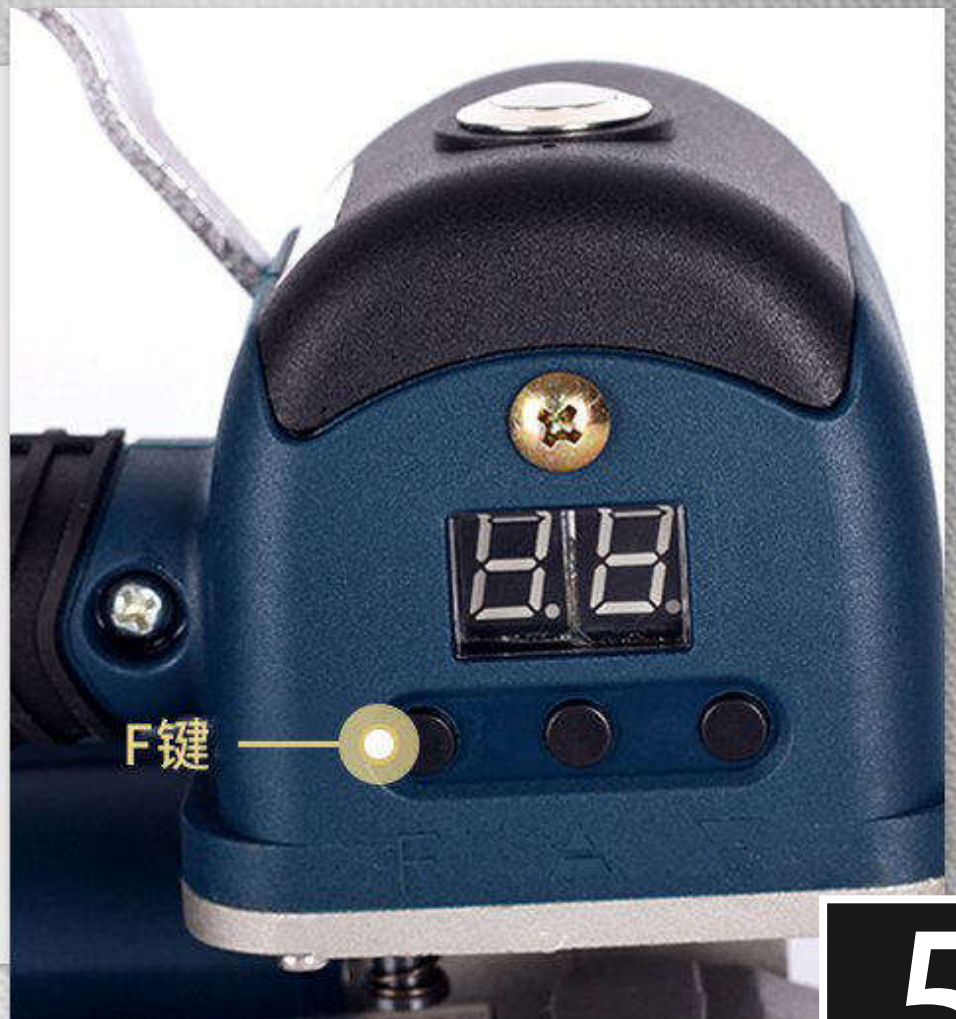

Insulated non-slip handle

The machine is designed according to the heat body structure, and the surface is frosted to improve the comfort and function of the hands.

02.

Welding time and tightness

According to the F key, the F1 indicates the binding force and then indicates the fusion time according to the display F2.

DDA-DO

03.

High quality alloy

The machine soldering base plate is made of high quality metal and high strength, and the front packing belt is fixed to prevent packing from taking off.

04.

Easy to use

Press the tightening button on your right thumb until the packing strap is completely stretched, then press the fusion button until the strap is blown.

Splice button

Pull button

05.

Large capacity battery

The large capacity battery is easy to use. It can pack 80-200 bags and match two batteries.
